PROFESSIONAL SUMMARY

Full-Stack .NET Developer, AI Product Developer, and AI Tools Orchestrator focused on building real-world digital products by combining modern technology adoption with AI-assisted development workflows. I work with .NET, React Native, TypeScript, Supabase, REST APIs, AI integrations, mobile publishing, and VPS deployment.

Founder of JobFinderPilot AI, an AI-powered career and job application platform that helps users create ATS-friendly CVs, generate tailored cover letters, prepare for interviews, and improve their job application process. I built the product using AI tools as a planning, coding, review, and product development accelerator while applying software engineering fundamentals and product thinking.

My professional background in public safety strengthened my discipline, responsibility, analytical thinking, and ability to solve problems under pressure. My career focus is full-stack development, AI-powered products, mobile applications, SaaS platforms, and international software engineering opportunities.

TECHNICAL SKILLS

Backend Development: C#, .NET, ASP.NET Core, REST API, Entity Framework Core, LINQ

Frontend Development: React, TypeScript, JavaScript, HTML, CSS, TailwindCSS

Mobile Development: React Native, Expo, iOS, Android, Mobile App Publishing

Database & Backend Services: Supabase, PostgreSQL, SQL Server, SQLite

AI Product Development & Orchestration: AI-assisted product development, AI API Integration, Prompt Engineering, AI-supported planning, AI-supported coding, multi-tool development workflows, technology adoption with AI tools

Deployment & Platforms: VPS Deployment, Apple App Store, App Store Connect, Google Play Store, Google Play Console, GitHub

DevOps & Infrastructure: Docker, Docker Compose, Redis - Basic Working Knowledge

Architecture & Concepts: SOLID Principles, Clean Architecture, Layered Architecture, Component-Based Architecture

Tools: Visual Studio, VS Code, Git, GitHub, Postman

PROFESSIONAL EXPERIENCE

Founder & Full-Stack Developer - JobFinderPilot AI | 2026 - Present

AI-Powered Career & Job Application Platform

Developed JobFinderPilot AI, an AI-powered career platform designed to support users during the job search and application process. Built features that allow users to create ATS-friendly CVs, generate tailored cover letters, and prepare for job interviews based on job listings.

Developed the .NET backend structure of the platform and integrated Supabase for database, user data management, and backend service support.

Built mobile application flows using React Native and TypeScript.

Deployed the project to a VPS server and gained hands-on experience with production deployment.

Published the application on both Apple App Store and Google Play Store.

Managed the product idea, development workflow, publishing process, and technical positioning using AI tools and modern development practices.

Technologies: .NET, React Native, TypeScript, Supabase, AI API Integration, VPS Deployment, App Store Connect, Google Play Console

SELECTED PRODUCTS & PROJECTS

KidsColorBook

Mobile Coloring App - Live on iOS and Android

Developed a child-friendly mobile coloring experience with drawing, coloring, gallery, and user interaction flows.

Worked on offline usage, local app experience, and mobile-friendly user interaction.

Prepared and published the app on both iOS and Android platforms.

Technologies: React Native, Expo, TypeScript, SQLite, App Store Connect, Google Play Console

Cosmo Clash

Space-Themed Action Game - Live Mobile App

Designed and developed core game mechanics, UI/UX flows, and mobile animations.

Published the game on Google Play Store and worked on performance optimization for mobile gameplay.

Reached 17 early users on Google Play Store.

Technologies: React Native, Expo, TypeScript, Google Play Console

FocusClock - Focus Timer

Gamified Pomodoro Focus App - Live Mobile App

Developed the focus timer flow and virtual plant growth-based gamification system.

Built statistics, session tracking, ambient sound, and offline usage features.

Published the app on Google Play Store.

Technologies: React Native, Expo, TypeScript, Google Play Console

Moonlit Echoes

Relaxing Sounds & Sleep Aid App - Live on iOS and Android

Developed audio player and sound mixer features for a relaxing sounds and sleep aid mobile application.

Built timer and sleep mode flows with a calm, simple, and user-friendly mobile UI/UX.

Published the app on both Apple App Store and Google Play Store; reached 23 early users.

Technologies: React Native, Expo, TypeScript, Audio API, App Store Connect, Google Play Console

English Course Platform

React Course Platform - Demo Project

Developed course listing and course detail pages with a responsive user interface.

Created a component-based frontend structure and published the source code on GitHub.

Technologies: React, TypeScript, CSS, GitHub

Dietitian Demo Website

Business Website - Demo Project

Designed and developed the full frontend for a nutrition consultant demo website.

Built responsive, modern UI/UX with a component-based frontend architecture.

Technologies: React, TypeScript, TailwindCSS

EDUCATION

Anadolu University | Graduation Date: May 10, 2026

Open Education Faculty - Computer Programming

PROFESSIONAL BACKGROUND & CAREER TRANSITION

Alongside my professional career in public safety, I have systematically developed myself in software engineering through self-learning, university education, and real-world product development. I apply discipline, responsibility, analytical thinking, and problem-solving skills to build real products, publish mobile applications, deploy projects to production, and improve products with user-oriented thinking.

Career focus: .NET backend development, React Native mobile development, AI-powered products, AI tools orchestration, full-stack web applications, SaaS platforms, and production deployment.

TECHNICAL INTERESTS

Photonic Computing, Future Computing Systems, Computer Architecture, AI-powered SaaS products, Mobile Product Development.
